

actiCAP slim with snap holders

the next generation in active electrode technology

- ✓ Gel-based active electrode system for high-quality EEG recordings even at higher impedances
- ✓ Quick electrode preparation with direct LED feedback on the electrode
- ✓ Provides an outstanding user experience for participant and researcher
- ✓ Cap sizes range from infants to adults; available channel counts: 8 – 160

Great match for various application fields

EEG & Brain Stimulation

Slim profile for close coil positioning;
active electrodes for shortest
recovery after artifacts

Developmental EEG

Small and lightweight design
maximizes comfort, safety and
allows high electrode density

Sleep

Larger openings allow
paste application for
long-term recordings

mobile EEG

Active electrodes and low
point of gravity minimizes
motion artifacts
