Installing the actiCAP software:

1. Plug in the USB stick and open the installation menu via double click on autorun.exe.

Important: Please make sure to respect the physical channel order when connecting electrode sets. Before connecting or disconnecting any electrode set (step 2 and 3) make sure that the actiCAP ControlBox is switched OFF.

2. Use the flat ribbon cable to connect the actiCAP ControlBox to the amplifier. Then connect each splitter box to the correspondent connector on the ControlBox.

- Ch. 97-128 Splitter Box
- Ch. 65-96 Splitter Box
- Ch. 33-64 Splitter Box
- Ch. 1-32 Splitter Box
- Ch. 1-32 Amplifier
- Ch. 33-64 Amplifier
- Ch. 65-96 Amplifier
- Ch. 97-128 Amplifier

3. Connect the GND and REF electrode to the ControlBox.

- Green ports
- Yellow ports
- Red ports
- White ports

Installation of the actiCAP drivers

4. Remove the battery cover on the rear side of the ControlBox. Then use the actiCAP USB cable to connect the ControlBox to the computer. Windows will install the driver automatically.

Warnings:

1. The splitter box must not come into contact with water.
2. Do not pull the cables when removing the electrodes from the cap. Use both hands to remove the electrodes from the holder.

Prepare a 64 channel actiCAP slim or actiCAP snap electrode cap in approx. 10 minutes following these steps. Start with the GND and REF electrodes.

I. Slightly lift the electrode
II. Inject the gel under the pellet
III. Press down the electrode

Note: To ensure correct and safe use of the products, make sure that you also read the Operating Instructions carefully prior to operation.
